# BlueFox ST1

## Application

BlueFox ST1 does not need any installations. The Monitoring Bracelet can be used anywhere in any water. Whether in swimming pools, lakes, beaches, ponds, waterways or rivers.

## Using until

To guarantee a reliable functionality of every single component, we recommend to exchange the capsule once the expiry date printed on the top lid of the capsule has been reached.

## Replacement Capsule

If an alarm has been triggered or the expiry date has been reached, a new alarm capsule needs to be inserted.

Ask your BlueFox Dealer for the capsule.

## Replacement of the Capsule

Inserting a new capsule is easy. The capsule just needs to be placed on the right position and be pushed until it locks itself.

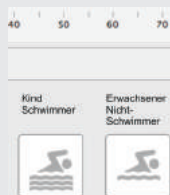

## Programming / Charging

Every BlueFox ST1 can be programmed individually on depending on the age and the swimming ability.

The same USB cable is used for charging the device.

## BlueFox Configurator

The individual setting of the BlueFox ST1 can be changed on every Computer. Presettings in the free programm help to choose the right settings for every user.

## Personal Drowning Alert

**Domestic Pool**

**Beach**

**Public Pool**

**Lake**

**Watersport**

Drowning occurs silently and often unnoticed by Lifeguards and accompanying persons. Minutes or even seconds decide the outcome of the disaster.

BlueFox ST1 is an additional layer of safety for people in and around water. It helps, that the drowning person is heard, even if he cannot call for help anymore.

Whether while swimming, sailing or fishing.

BlueFox ST1 will not be distracted by anything and alerts immediately if people stay underwater for too long.

Stay safe!
